

Private Label Consumables

Boule develops, manufactures, and markets analyzers and consumables for both the human and veterinary in vitro diagnostic markets.

Boule has more than 25 years of experience in designing and manufacturing consumables for the medical device industry. Our private label products have an established supply of high-quality raw materials and validated design. Quality control and manufacturing processes consistently produce products on time that meet customer needs and comply to quality standards.

Unique set of capabilities

Boule has a strong legacy in hematology diagnostics, with over 25 years of total system technology, R&D, and manufacturing experience as well as marketing, sales, and support in more than 100 countries worldwide.

Boule excels at a collaborative process from design to development and manufacturing products to meet our partners' exacting specifications.

Long term private label agreements and collaborations are in place with several multi-national IVD companies and with emerging start-ups with novel product introductions.

Design and manufacture your design or partner to produce a new design.
